Question

Suppose someone drops a rock off a cliff of height h . As it falls, I snap a million photographs, at random intervals. On each picture I measure the distance the rock has fallen.

What is the average of all these distances? That is to say, what is the time average of the distance traveled?¹

Distance Formula

$$x(t) = \frac{1}{2}gt^2$$

$$g = 9.8067\text{ms}^{-2}$$
